Proposal: Per the attached file, it is proposed to modify the program of study for Associate of Applied Science degree in Business Management.

Rationale: Students should be able to complete a 2-year degree in two years. Content specialist determined these changes so the credits are reduced to 60. Since this degree is an applied associate degree with the major focus being on employment of students upon graduation, it was determined that some of the courses need to be changed to better meet the needs of students.
